Delivering Zero to Landfill for leading manufacturer

MANN+HUMMEL GmbH is a global leader of filtration products and systems, including the automotive, industrial, water, life-sciences and environment markets. With sales and manufacturing sites in the UK, the pursuit of innovation and excellence is pivotal to MANN+HUMMEL's business practise. This approach led to identifying the opportunity presented by Red Kite Recycling to realise a key objective - improving value through their recycling and achieving zero to landfill across all their UK waste management operations.

The Main Aim

Improving value for money within the waste budget and delivering zero to landfill

Residual waste generated at MHUK sites was originally being sent to landfill, and there was also a feeling that more value could be realised from recyclable materials. There were also significant servicing issues with existing waste management services, with the collection of high-volume waste streams often being delayed. Finally, there was the opportunity to completely revise the process at one of the MHUK sites to save time and money dealing with swarf waste from manufacturing.

Why Mann+Hummell UK Chose Red Kite Recycling

Mann + Hummell sought to engage Red Kite to completely review their current operations to simplify waste processes, generate more revenue and align more closely with their business strategy. They recognised our expertise in this area and our collaborative approach with specialist waste processors around the UK to provide a tailored and cost effective approach to their needs. Delivering zero to landfill and differentiated reporting between genuine recycling and diversion from landfill was also seen as an advantage to their governance and reporting.

Specifically, they were interested in tapping into our ability to:

- Deliver enhanced segregation of waste streams
- Utilise energy from waste as opposed to landfill for non recyclables
- Innovative treatment of waste streams to enhance value and operations

They also acknowledged the utility and benefits of our simple, consolidated reporting and compliance management tools, enabling all stakeholders to easily access financial measures, tonnages and compliance documentation.

THE RESULTS

MHUK were able to realise a number of key financial and strategic benefits:

- Achieved zero to landfill across all sites.
- Waste swarf management was improved, saving labour and increasing rebate value.
- A cleaner waste management process with reduced risk of oily spills.
- Instant compliance with ISO14001 via Red Kite's client portal.
- Single contact for waste movements, reducing complexity and increasing accountability.
